

CXWH-25/CXWH-50 is a wall-mounted impedance matching stereo volume control that links a pair of speakers to the speaker level output of an amplifier, receiver, or speaker selector. It is also known as WH25/WH50. If you want to operate many pairs of speakers without causing any damage to your amplifier or receiver, the volume control could be the perfect solution. In order to make the adjustment, bridge clips that are easily replaceable are typically utilised.

SPECIFICATIONS

Technical data	WH-25	WH-50
Rated power	25W	50W
Component set	Rotary switch with stopper, 5 volume levels, 1 off position	
Install depth	47mm	
Dimension (W*H*D)	70*120*80mm
